

Base64 Encoder

Encode text or a binary file as base64 (<https://en.wikipedia.org/wiki/Base64>)-encoded text, using just your browser. View the encoded value or download it as a file. (You can use our client-side base64 decoder (</Codecs/Base64Decoder>) to try it out!)

What is Base 64 Encoding?

Load the data to base64–encode from a file, then press the ‘Encode’ button:

Browse:

Alternatively, type or paste in the text you want to base64–encode, then press the ‘Encode’ button.

Privacy and Confidentiality

This encoder runs entirely in the browser—it does not send any data to any opinionatedgeek.com server for encoding. Learn more (</Blog/2016/11/6/new-client-side-encoders>).

☒ Automatically generate text rendition

☒ **Automatically generate download link (not good for large files)**

☐ **Use URL-safe base64**

☐ **Use simplified (faster) encoder**
